## Consumer Price Movements

### April 2009

#### CPI for All Urban Consumers (CPI-U)

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.2 percent in April before seasonal adjustment, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This index has fallen 0.7 percent over the last 12 months, due primarily to a 25.2 percent drop in energy prices. The year-over-year declines in March and April are the first since 1955.

On a seasonally adjusted basis, the CPI-U was unchanged in April after declining 0.1 percent in March. The energy index declined for the second straight month, falling 2.4 percent after declining 3.0 percent in March. The indexes for motor fuel, fuel oil, natural gas, and electricity all declined in April. The food index declined as well, falling 0.2 percent in April after a 0.1 percent decrease in March. The index for food away from home increased, but the food at home index fell 0.6 percent with none of the six major grocery store food groups posting an increase. Over the past year, the food index has risen 3.3 percent while the energy index has declined 25.2 percent.

Offsetting the declines in the food and energy indexes was a 0.3 percent increase in the index for all items less food and energy. Over 40 percent of the increase was due to a second consecutive large increase in the tobacco index. The index rose 9.3 percent in April as an increase in the federal excise tax on cigarettes went into effect. A larger increase in the index for medical care, an increase in the index for new vehicles, and an upturn in the lodging away from home index also contributed to the April increase. The index for all items less food and energy has risen 1.9 percent over the past year.

## CPI-U 12-Month Changes, 1999 to Present

# **Consumer Price Index Research Series Using Current Methods, 1978-2008**

By Stephen B. Reed and Kenneth J. Stewart

## **INTRODUCTION**

The Consumer Price Index (CPI) is the most widely used measure of inflation in the United States, and affects nearly all Americans. Annual cost-of-living adjustments (COLAs) for Social Security recipients and federal and military retirees are tied to changes in the CPI. The CPI also is used in the annual escalation of federal income tax brackets as well as personal exemption and standard deduction amounts. In addition, the CPI is used in the creation and analysis of many key economic indicators where real or constant-dollar measures are needed, including estimates of income, earnings, productivity, output, and poverty.

The Bureau of Labor Statistics (BLS) has made numerous improvements to the CPI over the past thirty-plus years. While these improvements make the present and future CPI more accurate, *historical* price index series are not adjusted for such improvements.<sup>1</sup> That said, the accuracy of the historical CPI is of great importance and interest to a variety of researchers. This paper presents an estimate of the CPI-U from 1978 to 2008 that incorporates most of the improvements made over that time span into the entire series. This measure, called the CPI research series using current methods (CPI-U-RS), attempts to answer the question, “What would have been the measured rate of inflation from 1978 forward had the methods currently used in calculating the CPI-U been in use since 1978?”

The CPI-U-RS is used by other statistical agencies that prefer a historically consistent CPI to deflate economic measures. The Bureau of Economic Analysis used the CPI-U-RS in its 1999 comprehensive revision of the National Income and Product Accounts.<sup>2</sup> The Bureau of Labor Statistics uses the CPI-U-RS in its measure of real hourly compensation for its quarterly measure of labor productivity and costs.<sup>3</sup> In addition, the Census Bureau uses the CPI-U-RS in estimates of historical real income.<sup>4</sup>

The CPI-U-RS was constructed by adjusting U.S.-level CPI-U index series for methodological improvements, usually at the level of the item stratum such as new vehicles or residential rent.<sup>5</sup> That is, the adjustments were not made to the aggregate all-items CPI-U directly, but rather to its component indexes. These adjusted series were then aggregated to form the all-items CPI-U-RS and other high-level aggregates. It is important to note in this regard that the component indexes were adjusted directly; individual prices were not used to recompute those indexes.

The CPI-U-RS provides an annual inflation series that adjusts only for specified changes in BLS methodology. No attempt has been made to incorporate research results, such as on the value of safer, but perhaps less comfortable, air travel, for which there is no corresponding methodological change in the CPI-U. Nevertheless, the CPI-U-RS is expected to be of use to forecasters and other researchers in analyzing the trends and other movements in consumer inflation over the last two decades. It should help to answer the question of the degree to which the measured rate of inflation has been affected by improvements BLS has made.

Over the 31-year period of the study (December 1977 – December 2008), the CPI-U-RS increased 208.7 percent, compared to 238.5 percent for the CPI-U over the same time period. This represents an average annual increase of 3.70 percent for the CPI-U-RS, compared to 4.01 percent for the CPI-U, for an average annualized difference between the two measures of 0.31 percent.

## **METHODOLOGICAL IMPROVEMENTS TO THE CPI, 1978-2008**

There have been a number of significant methodological improvements made to the CPI since 1978. The CPI-U-RS differs from the CPI-U in that the CPI-U-RS is adjusted to incorporate estimates of what the measured rate of inflation would have been had those

improvements to the CPI-U been made earlier. Table 1 lists all the improvements made to the CPI since 1978 for which estimates of historical effects were made and included in the CPI-U-RS.<sup>6</sup>

Unlike the CPI-U, the historical CPI-U-RS is revised annually to incorporate the estimated historical effect of new methods, and to improve adjustments previously made. In addition, there were several improvements made to the CPI since 1978 for which no adjustments to the CPI-U-RS were made.<sup>7</sup> Adjustments to the CPI-U-RS were not made if the impact of the improvement on the rate of growth of the index could not be estimated or was believed to be negligible.

## Limitations of the CPI-U-RS

There are two primary limitations of the CPI-U-RS. The first reflects uncertainty surrounding the magnitude of each adjustment made to the CPI-U-RS. The second reflects the fact that some improvements to the CPI-U, for which no adjustments were made to the CPI-U-RS, may nevertheless have affected the rate of inflation as measured by the CPI-U.

Most adjustments to the CPI-U-RS were based on BLS research that estimated the impact of methodological changes to the CPI over a relatively short period of time, and the effect of a given methodological change (outside the period of study) is assumed to be constant over time. For example, while the price changes for the experimental CPI using geometric means (CPI-U-XG) were used to adjust most CPI item categories from 1991–98, the CPI-U-RS was adjusted downward from 1978–90 by the *average* differences between the CPI-U and CPI-U-XG from 1991 to the mid-1990s. Similarly, apparel indexes for the CPI-U-RS from 1978–90 are adjusted based on study of the effect of the improvement during the last six months of 1991. While there is typically a great degree of confidence about the direction of the adjustment made to the CPI-U-RS, there must be less confidence about the precise size of adjustments made based on such extrapolation.

Similarly, as noted above, there have been a number of methodological improvements made to the CPI for which *no* estimate was made for the CPI-U-RS. Other organizations, such as the Congressional Budget Office and the Council of Economic Advisers, have estimated the impact of some of these CPI improvements on the projected rate of inflation for budget forecasts.

## RESULTS

Over the 31-year period of the study (December 1977 – December 2008), the CPI-U-RS increased 208.7 percent, compared to 238.5 percent for the CPI-U over the same time period; the annualized difference between the two measures is approximately 0.31 percent. Table 2 gives the December-to-December percent changes for 1978 through 2008 for the CPI-U and CPI-U-RS for the All Items index and for CPI major groups.

Note: From 1978-1997, there were seven major groups in the CPI. In 1998, entertainment was dropped as a major group, and two major groups were added: recreation, and education and communication.

\*These represent changes from December 1997-December 2008

\*\*Entertainment was dropped as a major group in December 1997; these numbers represent percent changes from December 1977 through December 1997.

## CONCLUSION AND FUTURE RESEARCH

Since the CPI-U does not incorporate methodological changes retroactively, the BLS developed the CPI-U-RS for researchers interested in a measure of inflation that attempts to use current and consistent methods of estimating consumer inflation over the 1978-2008 time period.

The CPI-U-RS provides a somewhat different picture of inflation from 1978-2008 by including an estimate of most improvements made over time in the CPI back to 1978. This can provide users of CPI data a new perspective on inflation, and on the performance of the American economy, over the 1978-2008 time period.

Researchers should be aware of the limitations of the CPI-U-RS, including the fact that adjustments made to the CPI-U-RS from 1978 forward typically reflect extrapolations of estimates made over later, and much shorter, periods. In addition, the CPI-U-RS is not

adjusted for many improvements made to the CPI over the past 31 years. Nonetheless, for some purposes, the CPI-U-RS can serve as a valuable proxy for what the CPI-U would have been had current methods been in place from 1978 forward.

The CPI-U-RS is subject to revision. When an improvement is made to the CPI, and an estimate of the effect of that change can be made, the CPI-U-RS will be revised to reflect that improvement. In addition, if a superior method of adjusting the CPI-U-RS for past improvements is made available, the adjustments reported here will be refined.

To assist users, the All items CPI-U-RS indexes are available on request by calling 202-691-7000. In addition, the All items indexes are available for users who would like to link the CPI-U-RS to the CPI-U-X1 for periods prior to 1978.<sup>8</sup>

<sup>1</sup> Historical CPI indexes are occasionally revised when data collection or processing errors are discovered. Methodological improvements, however, do not result in data revisions.

<sup>5</sup> Because of limitations of available data, adjustments for periods prior to the 1987 CPI Revision often had to be made at a slightly higher level of aggregation, roughly corresponding to the level of a CPI expenditure class.

<sup>6</sup> A more detailed description of most of these methodological changes is available in Kenneth J. Stewart and Stephen B. Reed, "Consumer Price Index research series using current methods, 1978-98," *Monthly Labor Review*, June 1999, pp. 29-38.

<sup>7</sup> These are more fully described in Stewart and Reed.

<sup>8</sup> The CPI-U-X1 was an experimental measure of the All Items index using an estimate of rental equivalence from 1967 through 1982.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

# Technical Notes

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time of goods and services purchased by households. The U.S. Bureau of Labor Statistics (BLS) publishes CPIs for two population groups: (1) The CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers households of wage earners and clerical workers that comprise approximately 32 percent of the total population and (2) the CPI for All Urban Consumers (CPI-U) and the Chained CPI for All Urban Consumers (C-CPI-U), which cover approximately 87 percent of the total population and include, in addition to wage earner and clerical worker households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPIs are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained through personal visits or telephone calls by BLS trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W, separate indexes also are published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities; they measure only the average change in prices for each area since the base period. For the C-CPI-U, data are issued only at the national level. It is important to note that the CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and is subject to two annual revisions.

The index measures price change from a designated reference date. For the CPI-U and the CPI-W, the reference base is 1982-84 = 100.0. The reference base for the C-CPI-U is December 1999=100.0. An increase of 16.5 percent from the reference base, for example, is shown as 116.5. This change also can be expressed in dollars as follows: the price of a base-period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

### Calculating index changes

Movements of the indexes from one month to another usually are expressed as percent changes, rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The example shown in the box on this page illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

## **Energy prices**

Prices usually are available for the U.S. city average, 13 large metropolitan areas, the 4 census regions, 3 size classifications, and 10 areas reflecting the 4 census regions cross-classified by the 3 population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

*Natural gas and electricity.* Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the CPI. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI not only are for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.* The average prices for 40 and 100 therms of natural gas, and for 500 kilowatt hours of electricity (shown in table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Because heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised CPI.

*Fuel oil.* Only #2 fuel oil (home heating oil) is priced. (See table P1.) Prices are collected, in most cases, for quantities greater than 1 gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity or quick payment.

*Gasoline and automotive diesel fuel.* Gasoline and diesel prices, shown in table P3, are collected at the pump from a sample of full service, miniservice, and self-service gas stations. Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

- 1 therm = 100,000 BTUs (U.S. Department of Energy)
- 1 kwh = 3,412 BTUs (Edison Electric Institute)
- 1 gallon #2 fuel oil = 140,000 BTUs (U.S. Department of Energy)

## **Food and beverage prices**

Actual weighted average prices for food and beverages are calculated each month at the national level and for the four census geographic regions, as shown in table P4. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot, in general, be produced. It is hoped, however, that regional average prices will help to satisfy the need for local area data. It should be noted that the average prices for food in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary

disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. For cases in which the proportion of estimated prices used to calculate the average is considered too high, the average price is not published, and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. Detailed specifications are available from BLS information offices or from the Washington office, upon request.

### **Seasonally adjusted and unadjusted data**

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index before adjustment for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. Seasonally adjusted indexes and seasonal factors are computed annually. Each year, the last 5 years of seasonally adjusted data are revised. Data from January 2003 through December 2007 were replaced in January 2008. Exceptions to the usual revision schedule were: the updated seasonal data at the end of 1977 replaced data from 1967 through 1977; and, in January 2002, dependently seasonally adjusted series were revised for January 1987-December 2001 as a result of a change in the aggregation weights for dependently adjusted series. For further information, please see "Aggregation of Dependently Adjusted Seasonally Adjusted Series," in the October 2001 issue of the [CPI Detailed Report](#).

The seasonal movement of All items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used in the aggregation of the dependent series for the last 5 years, but the seasonally adjusted indexes will be used before that period. Note: 48 of the 73 components are seasonally adjusted for 2008.

Seasonally adjusted data, including the All items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the seasonal factors introduced in January 2008, BLS adjusted 20 series using Intervention Analysis Seasonal Adjustment, including selected food and beverage items, motor fuels, electricity and vehicles. For example, this procedure was used for the Motor fuel series to offset the effects of events such as damage to oil refineries from Hurricane Katrina.

Data for an additional 11 metropolitan areas are published every other month [on an odd- (January, March, etc.) or even- (February, April, and so forth) month schedule] for the following areas:

## How to Obtain Consumer Price Index Information

CPI information is available from BLS electronically, through publication subscriptions, and via telephone and fax through automated recordings. Information specialists also are available in the national and information offices to provide help and to respond to questions.

### Electronic access to CPI data

BLS on the Internet. Through the Internet, BLS provides free, continuous access to published CPI data and press releases. The most recent month's CPI is made available immediately at the time of release. Additionally, a database called LABSTAT, containing current and historical data for the CPI, is accessible.

*World Wide Web.* BLS maintains a Web site at <http://www.bls.gov> on the Internet. This BLS homepage provides access to LABSTAT, as well as links to program-specific homepages. The CPI homepage <http://www.bls.gov/cpi/> provides other CPI information, as well as indexes. This includes a brief explanation of methodology, frequently asked questions and answers, contacts for further information, and explanations of how the CPI program handles special items, such as medical care and housing. In addition, CPI press releases and historical data for metropolitan areas can be accessed by linking to the regional office home pages from the main BLS Web site listed above.

### Recorded CPI data

Summary CPI data are provided on 24-hour recorded messages. Detailed CPI information may be obtained by calling (202) 691-5200. A touch-tone telephone is recommended, as this system allows the user to select specific indexes from lists of available data.

Recorded summaries of CPI data also may be obtained by calling any one of the metropolitan area CPI hotlines listed next. These hotline summaries typically include data for the U.S. city average, as well as for the specified area. The recordings are approximately 3 minutes in length, do not require a touch-tone telephone, and are available 24 hours a day, 7 days a week.
